

PURE WATER PROJECT LAS VIRGENES-TRIUNFO

Bringing Our Water Full Circle

Advanced Water Purification Facility (AWPF) and Pipeline Construction Frequently Asked Questions (FAQ)

What is the Pure Water Project?

The Pure Water Project Las Virgenes-Triunfo is a regional water reliability project that will transform surplus recycled water from the Tapia Water Reclamation Facility into a high-quality, drought-resilient local drinking water supply. Using proven advanced purification technologies, the water will be treated to exceed California drinking water standards. Once purified, the water will be conveyed to the Las Virgenes Reservoir, blended with imported water, and receive final treatment at the Westlake Filtration Plant before entering the distribution system.

What is Pure Water?

Pure Water is safe, high-quality drinking water created by further purifying recycled water using advanced, proven treatment technologies. This process meets or exceeds all state and federal drinking water standards and provides a reliable local water supply.

How is the Pure Water Project funded?

The Pure Water Project is funded by state and federal grants and low-interest loans, minimizing the impact on ratepayers. The total project budget is \$466 million, with roughly \$303 million allocated to design and construction.

What is being built?

The project includes construction of a new Advanced Water Purification Facility (AWPF) at 30800 Agoura Road in the City of Agoura Hills, which will produce high-quality purified recycled water. Additionally, new pipeline will be built to convey recycled water to the AWPF and purified water to Las Virgenes Reservoir, as well as supporting pipelines needed to connect the overall system. Once completed, the Pure Water Project will provide a reliable local water supply for communities throughout western Los Angeles County and eastern Ventura County.

What is the anticipated construction schedule?

Construction is scheduled to begin in Spring 2026 and will continue through Fall 2028, followed by pipeline and facility testing through Winter 2029/2030. Operations are expected to begin in Spring 2030.

What construction impacts are expected, and how will they be minimized?

Residents and businesses may experience construction noise, dust, vibration, traffic delays, and temporary lane or full street closures during trenching, pipeline installation, and facility construction. To reduce these impacts, the project team will implement mitigation measures such as modified or extended working hours, using dust-control practices, maintaining equipment to minimize noise, and monitoring vibration near sensitive areas. Advance notice will be provided for any major traffic changes or significant disruptions, to help the community plan ahead.

How will traffic, parking, and property access be managed during construction?

Construction may result in traffic delays, temporary lane closures, detours, and short-term parking or access restrictions near active work areas. Our construction team will work to maintain driveway and business access as much as possible. When limited access to homes or businesses is expected, affected properties will receive advance notification so residents and business owners can plan accordingly. Emergency services access will be maintained at all times.

How can I learn more about Pure Water Project construction?

To sign-up for project updates and learn more about construction, please visit the project website at ourpures2o.com or call our project helpline at (818) 245-4440.
